1. **GRANTEE:** Uttam Composites LLC  
   Houston, TX

2. **PURPOSE AND LIMITATION:**
   a. This special permit authorizes the manufacture, mark, sale, and use of non-DOT specification fully wrapped carbon fiber composite cylinders with a seamless aluminum liner that meets the requirements of the ISO 11515:2013 Standard, except as specified herein. This special permit provides no relief from the Hazardous Materials Regulations (HMR) other than as specifically stated herein. The most recent revision supersedes all previous revisions.

   b. The safety analyses performed in the development of this special permit only considered the hazards and risks associated with the transportation in commerce.

   c. In accordance with 49 CFR 107.107(a), party status may not be granted to a manufacturing permit. These packagings may be used in accordance with 49 CFR 173.22a.

3. **REGULATORY SYSTEM AFFECTED:** 49 CFR Parts 106, 107 and 171-180.

4. **REGULATIONS FROM WHICH EXEMPTED:** 49 CFR § 173.302(a) in that cylinders that do not meet the UN composite cylinder requirements are not authorized, except as specified herein.
5. **BASIS:** This special permit is based on the application of Uttam Composites LLC dated September 1, 2022 and submitted in accordance with § 107.109.

6. **HAZARDOUS MATERIALS (49 CFR 172.101):**

7. **SAFETY CONTROL MEASURES:**

   a. **PACKAGING:** Packaging prescribed is a non-DOT specification fully wrapped fiber reinforced composite gas cylinder with aluminum alloy 6061-T6 liner as described in Catalina’s application on file with the Office of Hazardous Materials Safety (OHMS). Each cylinder must meet the design and construction requirements for UN composite cylinders specified in § 178.71(l) and of ISO Standard 11515:2013, except as follows:

   (1) **Scope:** Cylinders made under this special permit are limited to a maximum service pressure of 250 bar (3,626 psig), with a maximum water volume of 3,000 liters.
(2) **Type Approval Procedure (General Requirements):**

(i) A DOT Independent Inspection Agency (IIA), approved in writing by the Associate Administrator for Hazardous Materials Safety (AAHMS) in accordance with 49 CFR Part 107, Subpart I, must review the results of design qualification for this special permit. The IIA must either verify that the cylinder design meets the requirements of the special permit based on the testing and other documentation submitted in the application for special permit, or the IIA may require additional testing and/or information from the manufacturer to verify the cylinder design meets all requirements of the special permit. Prior to production of cylinders, the IIA’s verification of the cylinder design must be submitted to and acknowledged in writing by the OHMS.

(ii) Prior to any manufacture of cylinders under this special permit, an IIA, approved in writing by the AAHMS, must provide inspections and verifications of all batch testing and all new design qualification testing in accordance with the requirements of this special permit.

(3) **Fire Resistance Test:** Service equipment for the Fire Resistance Test must be in compliance with 49 CFR 178.71(d). Any combination of valve/PRD is allowed if the criteria of ISO 11515:2013 § 8.5.9.3b is met.

(4) **High Velocity Impact Test:** The cylinders shall be tested in accordance with the ISO Standard 11119-3 (Gas Cylinders – Refillable composite gas cylinders and tubes – Part 3: Fully wrapped fiber reinforced composite gas cylinders and tubes up to 450L with non-load sharing metallic or non-metallic liners) with the exception that the cylinder shall be impacted by a 12.7-millimeter (0.5 caliber) armor-piercing projectile. If a single projectile will not penetrate the wall, additional rounds may be used.

(5) **Hardness Testing:** In lieu of hardness testing in accordance with 11515:2013, the Leeb Rebound Hardness Test (LRHT) using an appropriately calibrated instrument must be used.

(6) In lieu of stamping, the UT symbol may be marked.

(7) In lieu of ISO 9712 level 2 training, as required in ISO 11515:2013 Section 9.1.1, the operation of the test equipment shall be by trained personnel and supervised by qualified and experienced personnel certified to NDT Level II per ANSI/ASNT SNT-TC-1A guidelines.
b. **MARKING:**

(1) Each cylinder must be permanently marked (other than by stamping) in the composite on the sidewall. The marking must be easily visible and must be protected from external damage due to the environment and handling.

(2) The marking must contain the following:

   (i) DOT special permit number (DOT-SP 21069) followed by service pressure expressed in bar (psi).

   (ii) A serial number and the manufacturer’s identification number or a symbol as obtained from the Associate Administrator for Hazardous Materials Safety, located just below or immediately following the DOT marking above.

   (iii) The DOT inspector’s official mark must be placed near the serial number. The marking must contain the (month and year) of the initial hydraulic proof pressure test for that cylinder.

   (iv) The size of the letters and numbers used must be at least 0.64 cm (1/4 inch) high if space permits.

   (v) The following are examples of an authorized format for marking:

```
DOT-SP 21069-250 bar (3626psi)
1234-MM (or symbol)
II—MM/YY
```

(vi) Additional markings are permitted in the composite, provided the additional markings do not obscure the required marking and are not detrimental to the integrity of the cylinder.

(vii) Provisions for marking of the required requalification dates and RIN information must be made near the cylinder markings.

c. **REQUALIFICATION:** Each cylinder must be requalified once every 5 years by using one of the two methods described in this special permit. The facility that performs requalification of these composite cylinders must hold a valid DOT RIN for requalification of this type of composite cylinder as described in § 180.205(b) or have a valid special permit for requalification of this type of composite cylinder using Modal Acoustic Emission (MAE) testing.

(1) **Method 1 - Hydraulic Proof Pressure Testing and Visual Inspections.** The requalification facility must hold a RIN for requalification performing
hydraulic proof pressure testing and visual inspections and meet the following requirements:

(i) Knowledge, documentation, equipment and instrumentation for performing the external and internal visual inspection of cylinders manufactured in accordance with the provisions of DOT-SP 21069.

(ii) Knowledge, documentation and equipment for performing the proof-pressure testing of cylinders manufactured in accordance with the provisions of DOT-SP 21069.

(iii) Adequate facilities, handling equipment, and skills to ensure cylinders manufactured in accordance with the provisions of DOT-SP 21069 will not be subject to impact or other damage during disassembling and reassembling.

(iv) Acknowledgment the requalifier understands the specific operational controls of DOT-SP 21069, paragraph 7.d.(7) that state “cylinder must be rejected if it drops from a height greater than 2’.”

(v) Availability to document that during the requalification process, the structural integrity of frame design is not compromised and remains equal to or greater than the requirements specified in DOT-SP 21069, paragraph 7.d.(5).

(vi) Visual Inspections – The external and internal visual inspection must be in accordance with CGA pamphlet C-6.2 and with requalification facility standard operating procedure (SOP) for this type of composite overwrapped pressure vessels (COPVs) on file with OHMS.

(vii) Hydraulic proof pressure test as described in CGA Pamphlet C.1 in which the test pressure is equal to 1.5 times the marked working pressure and hold the pressure for a minimum of 3 minutes without a loss of pressure. The testing facility for proof pressure test must be equipped with a protection system (e.g. water jacket well or concrete barrier) to avoid injury during requalification process.

(2) Method 2 - Modal Acoustic Emission (MAE) Testing and External Visual Inspection. The requalification facility must hold a RIN for requalification performing MAE and external visual inspection and must meet the following requirements:

(i) Holder of a special permit in performing MAE testing on composite cylinders (tubes).

(ii) MAE testing must be in accordance with the Modal acoustic emission (MAE) Examination Procedure for Requalification of
Composite Overwrapped Pressure Vessels (Cylinders and tubes) posted on PHMSA website, and the additional SOP provided by the requalification facility on file with OHMS.

(iii) External visual inspection must be in accordance with CGA pamphlet C-6.2 and additional SOP provided by the requalification facility on file with OHMS.

(iv) Tubes with severe impact damage from rollover accident – For tubes that were subjected to severe impact damage from an event such as tube trailer collision or rollover accident, the pressurization of the MAE testing must be by hydraulic medium (e.g., water) rather than gaseous medium.

(3) Requalification date (month/year) must be permanently marked on the cylinder as specified in paragraph § 180.213. The marking of the RIN symbol on the cylinder certifies compliance with all the terms conditions of this special permit.

d. OPERATIONAL CONTROLS:

(1) Cylinders manufactured under this special permit are authorized for a maximum service use of 15 years from the date of manufacture.

(2) A cylinder that has been subjected to fire may not be returned to service.

(3) Manifolding of cylinders must be in accordance with the requirements of § 173.301(g).

(4) Transportation of Division 2.1 (flammable gas) materials is not authorized aboard cargo vessel and aircraft unless specifically authorized in the Hazardous Materials Table (§ 172.101).

(5) The cylinders or tubes manufactured under this special permit must be permanently mounted inside of framing (e.g., tube trailer, MEGC or ISO Frame) for transportation in commerce, the framing design and testing must meet the following requirements:

(i) All requirements of § 173.301(i); and

(ii) ISO frame design must meet all requirements of ISO 1496-3 “Series 1 freight containers — Specification and testing — Part 3: Tank containers for liquids, gases and pressurized dry bulk”. The design testing must be confirmed by a DOT certified Independent Inspection Agency (IIA) and be available to OHMS upon request.
(6) The cylinder/tube assembly must be equipped with a Fire Protection System (FPS), which meets the following criteria, and the design must be submitted to and acknowledged in writing by OHMS prior to first use:

(i) An FPS with pressure relief device (PRD), which includes sensors or pneumatic piping along the length of each tube to respond to a local or engulfed fire and release the internal pressure of each tube prior to rupture of any tube in the assembly. The FPS vent lines direct the released gas upwards and outside of the frame system. Standard Operating Procedures (SOP) for the FPS must include inspection of the entire FPS, all gauges, fittings, valves and vent system. The FPS design, test results and relevant SOPs must be submitted to the OHMS before the deployment of the first production of the tube assembly; or

(ii) If the packaging (tube assembly) is not equipped with an FPS, each tube in the assembly must be insulated and one of the insulated tubes must be bonfire tested in accordance with procedure described in ISO Standard 11515 with the following acceptance criteria and the test results must be submitted and acknowledged in writing by OHMS prior to first use:

The sample insulated tube, which is used for the bonfire-testing, must be exposed to an engulfed fire for a minimum of 20 minutes without rupturing.

(7) Cylinder (tube) handling: the cylinder must be rejected if it drops from a height greater than 2’ during the manufacturing and/or prior to being mounted to the framing.

(8) Standard Operating Procedures (SOP’s) that govern filling/discharging operations and incident reporting must be provided to the OHMS in advance of the first unit’s deployment.

8. **SPECIAL PROVISIONS:**

a. In accordance with the provisions of Paragraph (b) of § 173.22a, persons may use the packaging authorized by this special permit for the transportation of the hazardous materials specified in paragraph 6, only in conformance with the terms of this special permit.

b. A person who is not a holder of this special permit, but receives a package covered by this special permit, may reoffer it for transportation provided no modification or change is made to the package and it is offered for transportation in conformance with this special permit and the HMR.
c. A current copy of this special permit must be maintained at each facility where the package is offered or reoffered for transportation.

d. Each packaging manufactured under the authority of this special permit must be either (1) marked with the name of the manufacturer and location (city and state) of the facility at which it is manufactured or (2) marked with a registration symbol designated by the Office of Hazardous Materials Safety for a specific manufacturing facility.

e. A current copy of this special permit must be maintained at each facility where the packaging is manufactured under this special permit. It must be made available to a DOT representative upon request.

9. **MODES OF TRANSPORTATION AUTHORIZED:** Motor vehicle, rail freight, cargo vessel, and cargo-only aircraft.

10. **MODAL REQUIREMENTS:** A current copy of this special permit must be carried aboard each cargo vessel, aircraft, or motor vehicle used to transport packages covered by this special permit. The shipper must furnish a copy of this special permit to the air carrier before or at the time the shipment is tendered.

11. **COMPLIANCE:** Failure by a person to comply with any of the following may result in suspension or revocation of this special permit and penalties prescribed by the Federal hazardous materials transportation law, 49 U.S.C. 5101 et seq:

   o All terms and conditions prescribed in this special permit and the Hazardous Materials Regulations, 49 CFR Parts 171-180.

   o Persons operating under the terms of this special permit must comply with the security plan requirement in Subpart I of Part 172 of the HMR, when applicable.

   o Registration required by § 107.601 et seq., when applicable.

Each “Hazmat employee”, as defined in § 171.8, who performs a function subject to this special permit must receive training on the requirements and conditions of this special permit in addition to the training required by §§ 172.700 through 172.704.

No person may use or apply this special permit, including display of its number, when this special permit has expired or is otherwise no longer in effect.

“exemption” to “special permit” and authorizes a special permit to be granted up to two years for new special permits and up to four years for renewals.

12. **REPORTING REQUIREMENTS:** Shipments or operations conducted under this special permit are subject to the Hazardous Materials Incident Reporting requirements specified in 49 CFR §§ 171.15 - Immediate notice of certain hazardous materials incidents, and 171.16 - Detailed hazardous materials incident reports. In addition, the grantee(s) of this special permit must notify the Associate Administrator for Hazardous Materials Safety, in writing, of any incident involving a package, shipment or operation conducted under terms of this special permit.

Issued in Washington, D.C.:
