

Lithium Battery Air Safety Advisory Committee Meeting Minutes Addendum #1

April 25, 2024

I. Addendum

The following text is added to section VII "International Update" of the official meeting minutes from the April 25, 2024, Lithium Battery Air Safety Advisory Committee. The addendum was discussed and approved during the Committee's November 7, 2024, meeting.

"One member noted that granting of a Special Permit required demonstration of an equivalent level of safety to existing regulations, and that there are various ways of accomplishing this, such as reducing the state of charge of batteries in transport to a level well below the normal 30% requirement."

At this moment, I certify that the preceding minute addendum is accurate and complete to the best of my knowledge.

A handwritten signature in black ink that reads "Bob Brown". The signature is fluid and cursive, with a long horizontal stroke extending to the right.

Bob Brown, Chairman
Lithium Battery Air Safety Advisory Committee
