Subject: LOI request for Marine Pollutants for IMDG Code shipments
To: infocntr@dot.gov <infocntr@dot.gov>

Good afternoon.

I am seeking a letter of interpretation related to the marking of limited quantity marine pollutants under the IMDG Code.

For background: I am interested in how to mark, label, placard, and document under the IMDG Code shipments of UN1950, Aerosols, 2.1, limited quantities, that also meet the IMDG Code classification of a marine pollutants since they contain 30% heptane. I am aware that the technical name(s) of the marine pollutant are not required on the documentation or package marks for the proper shipping name aerosols under IMDG Code 3.1.2.9 because the proper shipping name AEROSOLS does not have n.o.s. in it and/or there is no reference to special provision 274 in IMDG Code 3.2 Dangerous Goods List (DGL) column 6 special provisions. That was a change a few years ago so the proper shipping name on the dangerous goods transportation document would have been AEROSOLS instead of AEROSOLS (HEPTANE).

What am I curious about is the required on the documentation (basic description and limited quantity and marine pollutant, etc.), package (which marks and labels), and freight containers (which marks and placards) for UN1950 Aerosols, that meet the definition of a limited quantity and also meet the classification of a marine pollutant (with heptane as the marine pollutant).

What are the specific required marks and labels on the package for limited quantities of UN1950 Aerosols that also meet the definition of a marine pollutant under the IMDG Code (such as UN Number, Proper Shipping Name, technical name(s) in parentheses, limited quantity mark, marine pollutant mark, the hazard class label)?

What are the specific required marks and placards on the freight container for limited quantities of UN1950 Aerosols that also meet the definition of a marine pollutant under the IMDG Code (such as hazard class placard, the limited quantity mark, the marine pollutant mark)?

What are the specific requirements for dangerous goods documentation basic description and required additional information for limited quantities of UN1950 Aerosols that also meet the definition of a marine pollutant under the IMDG Code (such as UN Number, Proper Shipping Name, Hazard Class (Subsidiary Hazard Class when applicable), Packing Group when applicable, limited quantity, marine pollutant, etc.)? Thank you for your time.

Warm regards,
Andie
