

Pipeline and Hazardous Materials Safety Administration

AUG 1 8 2016

Mr. Brett T. Lehman
Security, Regulatory & Compliance Manager
GEODynamics Inc.
Engineered Perforating Solutions
10500 West Interstate 20
Millsap, TX 76066

Reference No. 16-0039

Dear Mr. Lehman:

This letter is in response to your March 3, 2016, email requesting clarification of the Hazardous Materials Regulations (HMR; 49 CFR Parts 171-180) applicable to an overpack. Your particular scenario involves non-bulk packages of Division 1.4D explosives that are shrink-wrapped together on a warehouse skid. The packages of explosives are covered by § 172.504(e), Table 2, and have an aggregate gross weight over 1,001 lbs. Specifically, you ask whether the tarpaulin cover required by § 177.835(h) is considered an overpack, as defined in § 171.8, and therefore subject to the provisions of § 173.25.

The answer is no. The tarpaulin required by § 177.835(h) is considered environmental protection and is not an overpack. Likewise, if all the required marks and labels are visible on the packages through the shrink-wrapped skid protected by the tarpaulin cover, no further action is necessary. If any of the required marks and labels are not visible on the packages through the shrink-wrap, the shrink-wrapped skid is considered an overpack and is required to be marked and labeled for every shipping description in the overpack as prescribed in § 173.25(a)(2). Further, as prescribed in § 173.25(a)(4), the word "OVERPACK" is only required to be marked on the shrink-wrapped skid if package specification markings, when required, are not visible through the shrink wrap.

I hope this information is helpful. Please contact us if we can be of further assistance.

Sincerely,

T. Glenn Foster

Subject: Request for Interpretation Letter

Importance: High

Mr. Glenn Foster,

We are requesting an Interpretation Letter for the below:

We had a level 2 roadside conducted on March 1st with one of my driver's in Midland, TX. The trooper cited my driver for not properly marking an OVER-PACK.

However, I don't agree that this would be considered OVER-PACK. So the trooper is saying that they TARP is considered an OVER-PACK... He didn't remove the tarp to see that the boxes on the pallet were shrink wrapped and that you could clearly see all markings through the shrink wrap on the charge boxes. You can see in the pictures; we are completely placard. We have NEVER had to label OVER-PACK on the shrink wrap. I'm thinking, the way the tarp is wrapped around the charges, the trooper is considering this as an "OVER-PACK" but that's incorrect. The tarp is required by DOT to protect from weather, etc. We are required to see a Judge in April and I want to provide the Judge with an Interpretation letter to help us fight this citation.

The cite below clearly states that when a tarp is used placards are required, not "overpack." Even when using shrink wrap if the markings and labels are visible through the wrap you don't have to remark or label the exterior. The tarp is a required cover from the elements not an overpack because the tarp doesn't stay with the product once unloaded like an overpack does. All you need is a placard.

177.835(b) Class 1 materials

(1) Whenever tarpaulins are used for covering Class 1 (explosive) materials, they shall be secured by means of rope, wire, or other equally efficient tie downs. Class 1 (explosive) materials placards or markings required by §177.823 shall be secured, in the appropriate locations, directly to the equipment transporting the Class 1 (explosive) materials. If the vehicle is provided with placard boards, the placards must be applied to these boards.

§177.823 Movement of motor vehicles in emergency situations.

(a) A carrier may not move a transport vehicle containing a hazardous material unless the vehicle is marked and placarded in accordance with part 172 or as authorized in §171.12a of this subchapter

§173.25 Authorized packagings and overpacks

(2) The overpack is marked with the proper shipping name and identification number, when applicable, and is labeled as required by this subchapter for each hazardous material contained therein, unless marking and labels representative of each hazardous material in the overpack are visible.

§177.835 Class 1 materials

(h)......Class 1 (explosive) materials other than black powder may be transported on flat-bed vehicles if the explosive portion of the load on each vehicle is packed in fire and water resistant containers or covered with a fire and water resistant tarpaulin.

This information was also provided by Ernest G Quail – Hazardous Materials Investigator - Field Operations & Enforcement, Southern Region
